What's It For? - Armillatox

Armillatox consists of a blend of phenols emulsified in a vegetable oil soap and is completely biodegradable. Diluted with water and applied from a watering can, it becomes a highly effective fungicide and moss killer.

It is available from the Trading Hut in a 300ml plastic container. Ideal for the treatment of honey fungus (*Armilloria mellea*, from which the product gets its name); clubroot in brassicas; white rot in onions; black spot on roses and rose re-plant problems caused by soil sickness; moss in lawns and on hard surfaces and fairy rings on lawns; destruction of ants in the garden and wasps' nests. It is a useful disinfectant for greenhouses/poly-tunnels, staging, seed trays etc., and is the only disinfectant to be effective against the dog roundworm *Toxocara canis*.

More information can be obtained from the Trading Hut on Sunday mornings.
